Craig Andrew Dela Cruz

IT Intern Applicant — Device Setup, Technical Support & Network Connectivity

Marilao, Bulacan • 0993 850 2489 • delacruzcraigandrew22@gmail.com • github.com/adu0723

Available for an onsite internship at Taipan Place, Ortigas Center

SUMMARY

BS Information Technology student specializing in Infrastructure Services, applying for the SEAOIL IT Intern role. I have hands-on practice configuring devices and network settings, troubleshooting Windows desktops, printers and connectivity faults, and working simulated service-desk tickets from report to verified fix. I document what I change and coordinate with users so requests get resolved quickly.

RELEVANT SKILLS

Device & end-user support	Windows desktop configuration, PC/router/peripheral setup, print queue faults, hardware diagnostics, quick to pick up device enrollment and license deployment workflows
Network connectivity	TCP/IP, DNS, DHCP, subnetting, Wi-Fi/WPA2 configuration, router administration, `ipconfig`/`ping` fault isolation
Tools	Google Workspace — Docs, Sheets, Slides (coursework use), Windows Server basics, Active Directory concepts
Service desk practice	Ticket triage and prioritization, structured troubleshooting, escalation judgment, clear user updates, ticket documentation
Records & detail	Data entry validation, routine audits, confidentiality, unit/license record-keeping

EXPERIENCE & PRACTICE

IT Support Practice — Service Desk Simulator — 2026

Self-directed, browser-based help desk scenarios

- Worked first-line tickets end to end across **account and access**, **Windows desktop**, **network connectivity**, **printer** and **hardware** scenarios.
- Triaged queues by impact and urgency, ruled out the cheap causes first, then verified each fix with the requester before closing the ticket.
- Recorded the steps taken on every ticket and escalated rather than guessing when a fault sat outside first-line scope.

Administrative & Systems Assistant — Work Immersion — Apr – May 2023

Barangay Loma De Gato, Clinic Department · Bulacan

- Maintained digital logs and record systems under strict confidentiality and integrity requirements.
- Ran routine data audits and validated system entries to eliminate discrepancies — the same checking habit needed for unit, SIM and license records.

Hardware Diagnostics & Repair — Epson L4260 Printer — 2026

Office peripheral maintenance, documented end to end

- Diagnosed a waste-ink service lock, disassembled the chassis, cleaned the saturated ink pads, and reset the internal counters with a service utility.
- Confirmed the repair with a test print and kept a photo/video service log so someone else could repeat the procedure.

PROJECT — CISCO NETWORKING LABS

SOHO & DHCP Network Configuration (Cisco Packet Tracer) — 2026

github.com/adu0723/cisco-networking-academy-labs

- Built a SOHO topology end to end and configured the wireless router via its GUI — SSID, WPA2-Personal (AES), admin credentials and a capped DHCP pool.
- Re-addressed a router to `192.168.5.1`, rebuilt its DHCP scope, and proved leases and reachability with `ipconfig` and `ping`.

EDUCATION & TRAINING

BS Information Technology — Infrastructure Services — Expected Jun 2027

Bulacan State University, Meneses Campus · Academic Scholar / Consistent Dean's Lister

Cisco Networking Academy Career Paths — In progress

Network Technician (target: CCST Networking) and IT Support Specialist pathways

- Network device configuration, addressing and basic troubleshooting; help desk operations, connectivity support.
